

Host-to-Storage SAN Implementation

This five-day course explores configuring various hosts to use storage through a SAN. Administer SAN switches through their CLI and GUI management tools to enable secure communication between the hosts and storage.

Audience

IT professionals who are familiar with basic SAN management practices.

Topics

- Pre-implementation tasks
- SAN component configuration
- Host connection configuration
- SAN switches
 - Configuration
 - Management operations
- CLARiiON and Symmetrix storage arrays
 - Configuration
 - Perform management operations
- Advanced host operations
 - Multipathing with PowerPath
 - Volume management
 - File system management
- Post-implementation tasks
 - Documentation
 - Maintenance
 - Troubleshooting
